## We are Causeway

We are the largest specialist software provider to the UK construction market, offering an expanding set of cloud software solutions that span the entire built environment life cycle from infrastructure design through to maintaining and operating the built asset.

| Established in **1999**

| **+300** people worldwide

| **+2500** customers

| Annual turnover **£35m**

Causeway Donseed is trusted by fit out and refurbishment contractors

## Software designed for construction contractors

The Causeway Donseed biometric labour management software solution provides construction contractors of all types with the project data they require in real-time. The solution integrates industry-leading fingerprint and facial recognition technology to capture consistent, reliable and accurate biometric data on site.

[See what our customers have to say.](#)

*'Typically we use the information collected through the Causeway Donseed solution to quickly collate time spent on site and provide our payroll with accurate, indisputable reports which they then invoice from.'*

**Kerr McEwan, Managing Director, M Squared**

*'Agency labour has decreased by 20 – 25%. It has been a significant amount of money. In terms of benefit for Murray & Willis Ltd and the timescale...after that first job it had paid for itself.'*

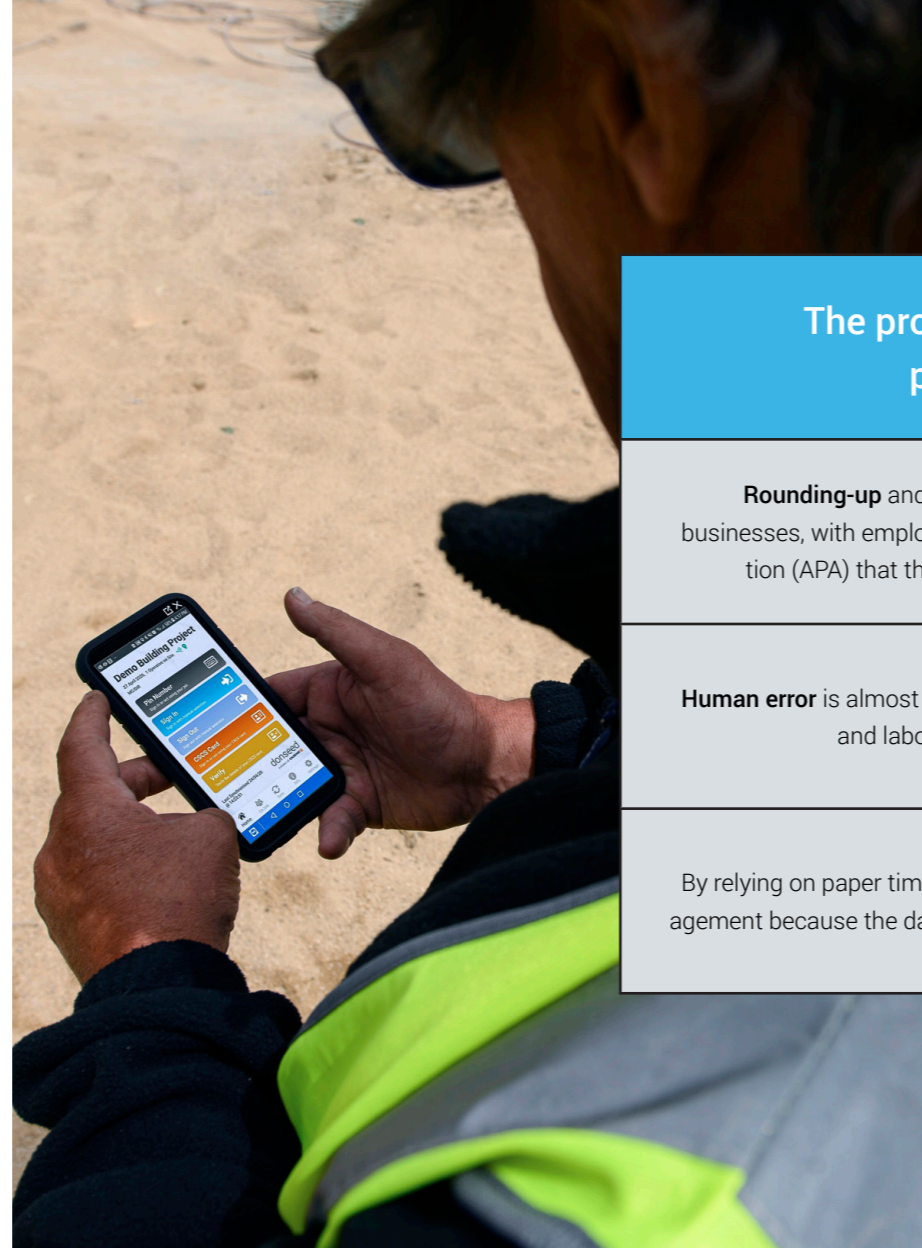

**Declan Dwyer, Finance Director, Murray & Willis Ltd**

## The benefits of moving to biometrics are too big to ignore

Construction is still heavily reliant on paper timesheets to track employees' time and attendance and to process payroll.

Our research shows that 60% of firms use it despite the availability of digital alternatives. The costs of using paper timesheets for a construction contractor can be enormous, and not just because of the money wasted on ink and paper.

It's the hidden costs that destroy the already tiny bottom lines.

The problems associated with paper timesheets	The benefits of using biometric-enabled software
<p><b>Rounding-up</b> and the adding of hours, which affects 75% of businesses, with employees admitting to the American Payroll Association (APA) that they stole an average of 4.5 hours per week.</p>	<p>Each worker has a unique biometric identifier that only allows that person to clock in and out, eliminating buddy punching and ensuring that time and attendance is always <b>accurate</b>.</p>
<p><b>Human error</b> is almost guaranteed because there are too many manual and labor-intensive 'variables' to consider.</p>	<p>Biometrics <b>automates</b> most of the error-prone and mundane work that payroll hates to do, freeing them to focus on more valuable work.</p>
<p>By relying on paper timesheets you <b>can't be proactive</b> with labour management because the data, even when accurate, is not visible in real-time.</p>	<p>It provides <b>real-time insights</b> - like reporting excess lateness and habitual sick days - that you can access from anywhere at any time, helping you to identify and deal with problems proactively.</p>

## Get complete and real-time visibility with Causeway Donseed

By capturing data that is consistent, reliable and accurate through biometric sign-in on site, the Causeway Donseed biometric solution provides significant project insights enabling construction contractors to:

- Reduce labour costs
- Limit health and safety exposure
- Eliminate paperwork
- Manage budgeted hours vs. actual hours

Enabled by leading biometric identifiers and cost-effective mobile apps on site

### All-in One Biometric Tablet

The Causeway Donseed all-in-one biometric tablet provides contractors with multiple identification options in one versatile, portable device. It is a compact touchscreen device with a built-in FBI-certified fingerprint sensor, contactless face capture technology and integrated smartcard reader (such as CSCS) to verify identity on site.

### iOS and Android Mobile App

The Causeway Donseed mobile application has been designed for construction contractors, regardless of turnover and / or how many construction sites being operated. The application is available to download, with a software license, onto iOS and Android mobile devices. An ideal solution for smaller teams.
